

Remodeling and Extension of Zurich Zoo Entrance and Shop

Zurich Zoo is one of Zurich's most-visited tourist attractions. Thanks to an increase in visitor numbers, the existing entrance was in need of restructuring to allow it to meet modern requirements. The new architectural solution was realized while the zoo remained in full operation and included a forecourt, ticket booths, visitors' center, zoo shop, café, volunteers' center and a new station for the new zoo rail line. The flowing lines of the new construction respond sensitively to the existing structure. Curving walls, display windows, and roofs come together to form spectacular sweeping lines. Inside, great attention was paid to the use of authentic materials. Guests are offered an exciting backdrop that responds to the zoo experience.
